BTX | Cloud Mobile App

July 2020

Why Mobile? Why Now?

50% of all electronics are mobile

U.S. mobile worker population predicted to increase from 96.2M to **105.4M in 2020**

Future proofs your business

Key Benefits of a Mobile App

Never Miss an Important Business Call

- Clients and work associates can easily reach busy employees anytime through one business number that will automatically ring their mobile app.

- Eliminates the necessity to track down employees on multiple numbers. The Mobile App improves and streamlines communications, seamlessly connecting a distributed and fast-moving workforce.

- Gain the latest communication tools for staff to never miss a business opportunity.

Leverage an Investment Already Made

- You've already invested in a phone system for your business, right? Extend all the benefits you've already made by making the same features available through your mobile phone.

- Not only can employees make and receive calls placed to their corporate phone number via their mobile device, they can leverage key communication features.

Protect Your Business

- You want to ensure business calls are always routed to your business versus an individual's mobile number who may or may not stay with you long-term. By having calls directed right to an employee's smartphone without revealing any of their personal information, you protect your business.

- The Mobile App also makes it easier and more flexible for "bring your own device" (BYOD) work environments.
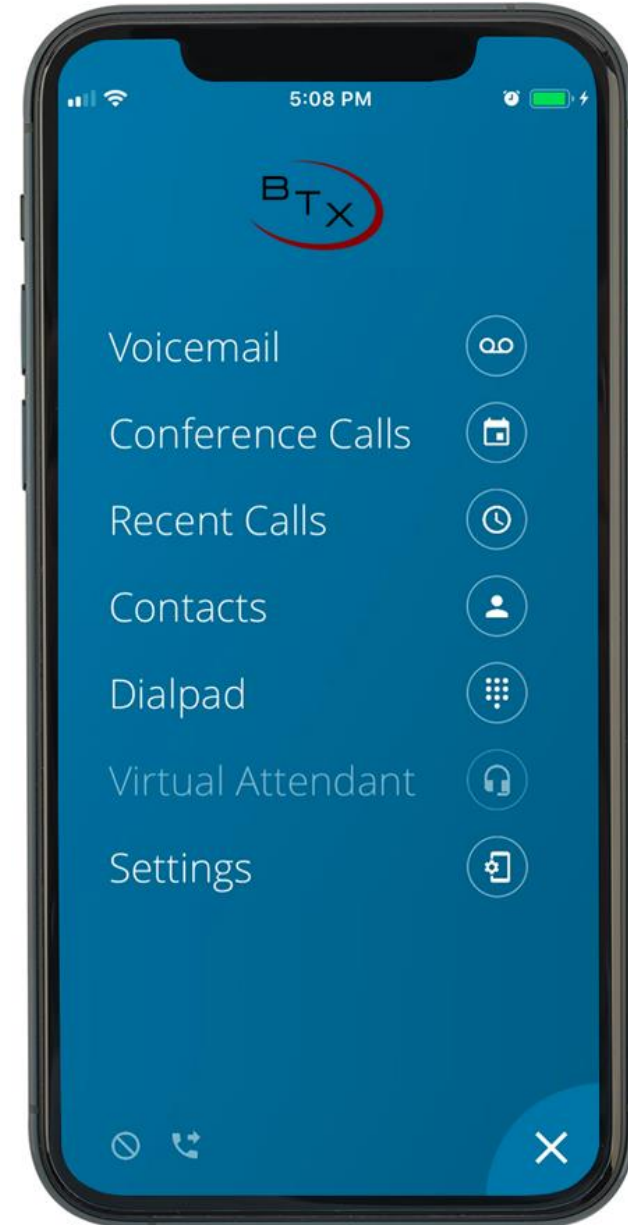

Features and Benefits

- Ability to use cellular or Wi-Fi networks

- Extension dialing to coworkers via your smartphone
